# Introduction: What is Telehealth?

## Telehealth vs. Telemedicine

- **Telemedicine:** The use of medical information exchanged from one site to another via electronic communications to improve a patient's clinical health status. (American Telemedicine Association (ATA))
- **Telehealth:** The use of telecommunications technologies to deliver health-related services and information that support patient care, administrative activities, and health education" (Agency for Healthcare Research and Quality (AHRQ))

## Telehealth Expansion due to COVID-19

- Amid vaccination efforts, quarantine and telehealth became the forefront of transmission prevention
  - "Between March 2nd and April 14th 2020, telehealth visits increased from 102.4 daily to 801.6 daily."
    - **683%** increase
- COVID-19 has set a new precedent for telehealth in our healthcare system.
  - U.S. insurers have quickly expanded coverage to include all telehealth visit types
  - States relaxed licensure requirements for care delivered across state boundaries.
  - At the onset of the pandemic, in person visits declined by almost 80%.

COUNCIL ON SOCIAL WORK EDUCATION

# Barriers to Vulnerable Populations Receiving Quality Telehealth Services (The Digital Divide)

## Examples of vulnerable and underserved populations

- People ages 65 and older (More than 41% of Medicare patients lack access to a desktop or laptop computer with a high-speed internet connection at home, (Roberts, Mehrotra, 2020).
- People living with a moderate to severe mental health disorders
- People living with a developmental disability
- People who are considered low-income or living in poverty based on the federal poverty level (Medicaid eligible patients)
- People who live in urban or rural settings
- People experiencing homelessness
- People who are uninsured or undocumented

COUNCIL ON SOCIAL WORK EDUCATION

# Barriers to Vulnerable Populations Receiving Quality Telehealth Services (The Digital Divide)

## Barriers & challenges to receiving quality care

- Absence of technology and a lack of reliable internet service (less than 60% of low-income households have access to broadband internet or a computer device (Velasquez, Mehrotra, 2020).
- Lack of digital literacy (unable to comprehend how to use a computer and other digital devices properly).
- Physical and or psychological impairments may bring difficulties in navigating technological devices (e.g. even with the support of hearing aide, the patient's hearing impairment may prevent them from hearing the provider clearly).
- Language barriers (access to language interpretation services may be limited).
- Clinicians may not be able to provide or be reimbursed for some virtual visits. The effectiveness of telehealth care delivery may be impaired.
- Inability for the patient to measure the providers qualification or level of attention during the visit. When building provider trust, some people like to “see” and “touch” the provider.

# Mental Illness and Substance Use Disorders in America

PAST YEAR, 2019 NSDUH, 18+

Among those with a substance use disorder:

- 2 IN 5 (38.5% or 7.4M) struggled with illicit drugs
- 3 IN 4 (73.1% or 14.1M) struggled with alcohol use
- 1 IN 9 (11.5% or 2.2M) struggled with illicit drugs and alcohol

Among those with a mental illness:

- 1 IN 4 (25.5% or 13.1M) had a serious mental illness

7.7%  
(19.3 MILLION)

People aged 18  
or older had a  
substance use  
disorder (SUD)

3.8%  
(9.5 MILLION)

People 18 or older  
had BOTH an  
SUD and a  
mental illness

20.6%  
(51.5 MILLION)

People aged 18 or older  
had a mental illness

In 2019, **61.2M** Americans had a mental illness and/or substance use disorder, an increase of 5.9% over 2018 composed entirely of increases in mental illness.

# Behavioral Health System of Care

- Health Promotion / Prevention
- Urgent / Crisis Care
- Primary Care
- Specialty Care
- Rehabilitation / Recovery Support

# Behavioral Health Technology is Not New

- Health Promotion/Prevention

- Digital/Media Health Messaging
- Digital Mood Apps
- Mantherapy.org
- You@College
- Treatment Locators/Drug Take Back

- Crisis Services

- Virtual Co-Responder Programs
- ODMaps (Overdose Geo-location)

- Primary/Specialty Care

- Remote BH Assessment
- Telemedicine/Telehealth

- Client Care Management
- Psycho-education
- E-Therapy

- Recovery Support Services

- Social Media/Facebook Groups
- AA/NA Sponsor App (VA)
- Virtual Clubhouses & Recovery Support Programs
- Sober Entertainment

- Workforce Training & Support

- Virtual Supervision
- Specialized training programs

# Behavioral Health and COVID-19

# COVID19 Behavioral Health Impacts

- Increased in crisis calls related to suicide and domestic abuse
  - SAMHSA Disaster Distress Hotline and other Helplines: ~900% increase
- Increased BH Crises
  - ER visits due to BH crises and children treated for injuries related to abuse;
  - Increased rates of suicide attempts, completed suicides, and overdose deaths;
- Increased demand for BH Treatment:
  - 52% of member organizations are seeing an increase in demand for their services, (“on demand care”)
  - Insufficient inpatient BH bed capacity
  - Insufficient workforce to meet demand
- Significant impact on BH Workforce
  - Stressed and strained healthcare workforce; feeling of helplessness, frustration, “Burnout”
  - Inability to serve people due to lockdowns, distancing, and isolation/quarantine orders
  - Lack of support/payment for patient services
  - Lack of PPE, rapid access to testing, exposure to illness; stigma – personal/family safety vs patients
  - Loss of colleagues

\*CMHC agency survey conducted by the National Council, (11/2020)

# SAMHSA National Action Plan - COVID

## PUBLIC

- PSA: Tips for Social Distancing, Quarantine, & Isolation; COVID Wallet Card
- Work with FEMA: CCP
- Disaster Distress Helpline/ Suicide Prevention Lifeline /National Helpline
- Messaging: Importance of staying connected

## SMI/SUD

- Treatment locators
- \*Telehealth (phone and video): CMS approved billable
- HIPAA and 42 CFR Part 2 rules relaxed due to privacy Medical Emergency Allowance
- OUD/OTP/MAT assistance
- Recovery resources and \$

## WORKFORCE

- National network of Addiction, Mental Health, and Prevention Technology Transfer Centers
- Opioid Response Network
- Provider Clinical Support System
- SMI-Advisor
- Free trainings and resources

[www.SAMHSA.GOV/coronavirus](http://www.SAMHSA.GOV/coronavirus)

# BIG Tele-Behavioral Health Pivot

## Opportunities

- Most BH agencies pivoted to telehealth
- Increased funding/policy flexibilities (Medicare, Medicaid, Commercial Ins.)
- Increased services provision (Dx Eval, MAT, O/P, Diversion Courts, Recovery)
- Reduced no-show rates
- Increased follow-up visits
- Increased treatment adherence
- Patient satisfaction
- Increased pre-service and CE training
- Increased technical assistance/innovation

## Challenges

- Limited access / bandwidth / equipment
- Limited data plans
- Clinicians providing tech support
- Provider discomfort/patient discomfort
- Lack of training
- Low/unequal reimbursement
- Limited technology infrastructure
- Not applicable to for all programs: IOP, Partial Hospital, ACT, AOT, Inpatient, Therapeutic Community, etc. (Hybrid)

# Region 8 Behavioral Health Technology Summit – 10/29/2020

## Technology as a Force Multiplier

Increase **Access**

Improve **Efficacy**

Enhance **Engagement**

What types of technology can help?

- Augment prevention, assessment, treatment & recovery
- Personalization is important
- Understand barriers
- Community partners

# Federal /National Telehealth Resources

**RURAL BEHAVIORAL HEALTH: TELEHEALTH CHALLENGES AND OPPORTUNITIES**

This is the first study to measure acceptability, usability, and accessibility barriers to mental and substance use disorder telehealth and health care services in rural communities and present ways telehealth can help overcome some of these barriers. Challenges to implementing effective telehealth services is greatly amplified when one does not have the resources and many other challenges—such as an already limited health workforce, poor connectivity, geographic and primary care practitioners—who are concerned with behavioral health in their communities. These practitioners may be faced with a lack of information to help them learn the behavioral health information and help for more information on the use of telehealth for behavioral health services, and increasing engagement and use of telehealth services.

The topic selected when to using remote and communication technologies to help with health information and treatment in rural areas. Telehealth also includes exchanging information and delivering services electronically, such as through video, email, webinars, or "text and forward" practices, which include videotaping a client encounter and forwarding the video to a professional who can address the situation at a later time. An access to allow some types of IT to increase across the "rural" space, the potential for telehealth also increases, including the use of mobile devices. The goal is to address rural, urban disparities across the behavioral health continuum of care (SAMHSA, 2012).

**Exhibit 1. Telehealth Across the Behavioral Health Continuum of Care**

Service	Challenges & Opportunities
Assessment	Online assessment can be done
Treatment	Capable Advanced Delivery through videoconferencing
Medication	First, ensuring connectivity to make medication to be delivered
Continuing care	Using chat for ongoing prevention
Education	Reducing the stigma and providing
Collaboration	Increasing the behavioral health workforce

Nearly one in four U.S. residents lives in a rural area. Accessibility to mental and substance use disorder health care services is a major challenge in rural areas. The use of telehealth can help overcome some of these barriers. Challenges to implementing effective telehealth services is greatly amplified when one does not have the resources and many other challenges—such as an already limited health workforce, poor connectivity, geographic and primary care practitioners—who are concerned with behavioral health in their communities. These practitioners may be faced with a lack of information to help them learn the behavioral health information and help for more information on the use of telehealth for behavioral health services, and increasing engagement and use of telehealth services.

Despite having a similar appeal for services, people in rural areas have less access to the behavioral health continuum of care than do people in urban areas. Although funding gaps, workforce shortages, and other resources issues.

Behavioral Health is Essential to Health • Prevention Works • Treatment is Effective • People Deserve
